

PSA Plant Manufacturer Contact Information

Last Updated: Jan 30 2025

When reaching out to a manufacturer about an issue with equipment, it is important to include the following details. This will help the manufacturer to give you the answers and support you need as quickly as possible.

- Equipment Model
- Equipment Serial Number
- Equipment troubleshooting so far (download troubleshooting history from website if applicable)
- Photos or videos of issue (if applicable)

Suppliers and Manufacturers often take a long time to respond or may need multiple reminders to answer your message. BHI recommends first reaching out via email if possible and sending a reminder email every three days if the manufacturer has not yet responded. If the manufacturer has not responded after two weeks, BHI recommends contacting them using a different method (website or phone call).
